

2024 Global Investor Statement to Governments on the Climate Crisis

Investors are increasingly taking a coherent approach to address environment-related financial risks in their portfolios, including both climate and nature, and seizing the growing opportunities associated with the net zero transition. Many are making net-zero commitments, embedding science-based net zero goals and strategies into portfolio decisions, setting investment targets, laying out Investor Climate Action Plans, engaging companies to support them in their transition plans, and urging governments to take robust action. Through these steps, investors are committed to ensuring portfolio value and generating returns over the long term for their beneficiaries and clients in line with their fiduciary duty. However, to make this transition effectively and at the rate and scale necessary, markets must be conducive to private sector investment with the appropriate legal, policy, and regulatory conditions.

Public policies enacted in the last few years – including the U.S. Inflation Reduction Actⁱ and the E.U. Fit-for-55ⁱⁱ – have helped to accelerate investment in global clean energy by 40% since 2020, reaching an estimated USD 1.8 trillion in 2023.ⁱⁱⁱ However, this falls short of the estimated annual USD 4.8 trillion by 2030 needed for the global economy to reach net zero emissions by 2050.^{iv} Furthermore, most of this growth is concentrated in developed economies and China, while other emerging markets and developing economies (EMDEs) continue to face significant underinvestment. The climate crisis is amplified by inaction and underinvestment in the sustainable management of water resources; nature and biodiversity; and adaptation to climate change, which will disproportionately affect EMDEs, with projected costs surging as global temperature rises.

The 2023 United Nations Climate Change Conference (COP28) reaffirmed the need for urgent action to achieve the ambition of the Paris Agreement and limit global temperature rise to 1.5°C above pre-industrial levels. In a landmark decision, the First Global Stocktake was concluded at COP28, with nearly 200 countries unanimously agreeing to support a just and equitable transition away from fossil fuels, and to accelerate the shift towards net zero emission energy systems by 2050. The consensus decision also called for an interim goal of tripling renewable energy and doubling energy efficiency globally by 2030, as well as conserving, protecting, and restoring nature and ecosystems to meet international climate goals.^v

Finance flows to EMDEs will be a high priority for the 29th United Nations Climate Change Conference (COP29) in Azerbaijan. Governments must craft and deliver on a New Collective and Quantified Goal (NCQG) on Climate Finance^{vi} that is ambitious and meets the needs of developing economies. Progress on finance flows at COP29 will set the stage for 2025 Nationally Determined Contributions (NDCs) ahead of COP30 in Brazil, where parallel efforts to address the climate and nature crises will converge. The next round of commitments must ensure that countries deliver ambitious climate action and keep 1.5°C within reach.

Investor Asks of Governments

Effective policies are essential at all levels of government to accelerate the private capital flows needed for a climate-resilient, nature-positive, just net zero transition. Therefore, we encourage a whole-of-government approach to implement policies in line with countries' nationally-determined contributions (NDCs) and a 1.5°C scenario, recognizing common but differentiated responsibilities and respective capabilities between emerging and developed economies, that will accelerate private sector action and large-scale investment. In order to achieve these goals, we call on governments to:

1. Enact economy-wide public policies:
 - a. Ensure that 2030 and 2035 targets in NDCs align with the goal of limiting global temperature rise to 1.5°C and are submitted to the UNFCCC by early 2025.
 - b. Provide incentives including grants and loan guarantees to accelerate the development, deployment, and dissemination of technologies that enable the net zero transition.
 - c. Implement robust carbon pricing mechanisms, rising over time, with appropriate coverage and adequate social considerations.
 - d. Develop climate-resilient, net zero government procurement standards to generate economies of scale for low-carbon, sustainable products.
 - e. Encourage inclusive national adaptation planning and supportive financing plans to promote resilience, especially in underserved and climate-vulnerable communities.
2. Implement sectoral transition strategies, especially in high-emitting sectors:
 - a. Scale up the deployment of low-carbon energy systems, electrification, and storage, including the development of enabling infrastructure such as the electric power grid.
 - b. Institute power sector reforms that increase competition and facilitate renewable deployment.
 - c. Remove fossil fuel subsidies and replace them with clean energy subsidies or tax breaks that boost clean energy deployment and bolster low-emission fuels.
 - d. Establish plans and targets to phase out unabated fossil fuel use in line with credible 1.5°C pathways including by ramping up pollution standards for large emitters and energy efficiency standards in end-use sectors^{vii}.
 - e. Reduce non-carbon dioxide greenhouse gas emissions and support the effective implementation of the Global Methane Pledge to reduce emissions by at least 30 percent from 2020 levels by 2030.
3. Address nature, water and biodiversity-related challenges contributing to and stemming from the climate crisis:
 - a. Implement ambitious National Biodiversity Strategies and Action Plans that support the targets in their NDCs, per the Global Biodiversity Framework.
 - b. Establish and deliver commitments to address water scarcity and pollution, halt degradation of other natural ecosystems, including halting and reversing deforestation and forest degradation by 2030 in line with the Global Stocktake and the Glasgow Leaders' Declaration on Forests and Land Use.
 - c. Scale up climate finance for nature-based solutions and water solutions.
 - d. Strengthen nature-related disclosures across the financial system by encouraging corporate reporting aligned with the Taskforce on Nature-Related Disclosures (TNFD).

4. Mandate climate-related disclosures across the financial system:
 - a. Require the public disclosure of 1.5°C pathway-aligned, science-based, and independently verifiable climate transition plans for listed and large non-listed companies, asset managers, and regulated asset owners.
 - b. Institute mandatory climate risk disclosure in financial reporting, subject to external assurance, in a manner consistent with the ISSB standards, with reporting for all public and large private companies and financial institutions, including disclosure of Scope 1, 2, and Scope 3 greenhouse gas emissions data.
5. Mobilise further private investment into climate mitigation, resilience and adaptation activities in EMDEs:
 - a. Scale credit-enhancement programs such as insurance mechanisms, guarantees, and other blended finance approaches, including through multilateral and development institutions.
 - b. Support the scale up of technical assistance and capacity building support to EMDE governments to develop project pipelines, from early-stage feasibility studies through to financial closure, along with technology transfer and support.
 - c. Enhance the use of collaborative platforms such as Just Energy Transition Partnerships to scale climate finance commitments and delivery in EMDEs, including through the use of various tools such as concessional public finance.

A 'whole-of-government' approach to align with 1.5°C

Investors and financial institutions recognize that policy mechanisms are essential to achieve a climate-resilient, net zero emissions economy by 2050 or sooner, with interim targets in line with credible 1.5°C pathways. Non-policy mechanisms, including public-private partnerships, sectoral strategies, and other collaborative efforts, should also play an important role in decarbonizing value chains and building out resilient electricity infrastructure. Renewed focus is needed to address rising energy demand from end-use sectors such as transportation, industry and buildings, including through energy efficiency. We encourage governments to consider other fiscal, financial and regulatory innovations that could reduce the cost of capital and facilitate a just and equitable net zero transition.

A whole-of-government approach is essential to unlocking the public and private capital flows needed for the net zero transition. As investors and financial institutions, we are committed to working with policymakers to deliver this approach in order to drive collective prosperity and sustainable economic growth while achieving our shared climate and nature goals in a way that maximises the benefits for people and nature.
